Higher education and research

Higher education and research policies are currently a hot spot in the political debate, while numerous reforms are being successively implemented. LIEPP's "Higher education and research" group gathers sociologists, economists, and political scientists wishing to develop an interdisciplinary approach to analyze and evaluate the effects of these public policies. Their research focuses more precisely on the conception and the implementation of policies aiming to emulate excellence in research, on the effects of project-based modes of research financing, and on the organisation of research units (critical size, diversity).
